PROFESSIONAL SUMMARY

Data engineer with 2+ years of cumulative experience spanning cloud ETL/ELT operations, pipeline recovery, data-processing troubleshooting, and backend application development. Worked with AWS, GCP, Kafka, Python/PySpark, and Java/Spring Boot across client assignments and independent projects.

TECHNICAL SKILLS

Data Engineering: Python, SQL, PySpark, ETL/ELT, Apache Kafka, batch processing, incremental backfills, partitioning, data reconciliation

Cloud Platforms: AWS: S3, Glue, EMR, Kinesis, Lambda, DynamoDB, CloudWatch, EC2, IAM; GCP; foundational Azure training

Backend & Databases: Java, Spring Boot, REST APIs, microservices, PostgreSQL, MongoDB, Node.js

DevOps & Monitoring: Git, GitLab CI/CD, Docker, Kubernetes, Prometheus, New Relic

PROFESSIONAL EXPERIENCE

Software Engineer I | Softtechers LLC

Dec 2025 – Present

- Contributed to a confidential enterprise case-management platform using Java, Spring Boot, microservices, MongoDB, and Apache Kafka.
- Worked with containerized services and development workflows involving Docker, Kubernetes, GitLab CI/CD, and Git.
- Used Prometheus and New Relic in the application monitoring and troubleshooting workflow during client work.
- Developed Briefcase, a supervised Spring Boot/PostgreSQL case-management assessment with case workflows, access controls, billing rules, and audit history.
- Built a supervised job-application tracker using React, Spring Boot, and PostgreSQL, including Microsoft Graph integration for Outlook-based status updates.

Data Engineer | TechRoots Inc.

Jan 2025 – Dec 2025

- Monitored and supported 3–4 client ETL/ELT pipelines on AWS, investigating CloudWatch alerts, tracing failures, and resolving issues with guidance from the technical lead.
- Investigated Kafka ingestion interruptions under heavy load and helped rework data sourcing to restore pipeline data flow.
- Reviewed execution plans for slow transformations, optimizing computation and storage access patterns and partitioning data to reduce processing bottlenecks.
- Handled upstream feeds arriving roughly three hours late by assessing downstream impact, performing incremental or partitioned backfills, and avoiding unnecessary full reloads.
- Recovered three missed days of daily batch aggregations after an expired API token stalled retries; evaluated job dependencies to choose safe sequential or parallel catch-up runs.
- Monitored cluster memory and warehouse query concurrency during recovery, then reconciled source and destination record counts for each affected date.
- Applied GCP pipeline and Python/PySpark training to engineering work and participated in recurring sprint-based troubleshooting.

Associate Systems Engineer | Tata Consultancy Services (TCS)

Oct 2022 – May 2023 | Kolkata, India

- Completed foundational training in Azure cloud services during onboarding before joining an Axway B2Bi integration project.
- Supported Java application development for the B2B integration project and received a commendation for a useful technical insight during development.

SELECTED PROJECTS

MetaSpike | Independent Data Engineering Project | In Development

Building a Python data pipeline for gaming-content opportunity analysis. Current engineering work includes deterministic game-entity resolution, point-in-time source bindings, append-only collection history, and historical baseline features. Private, not yet released.

Power-Fault-Classification | Computer Vision Coursework

Applied transfer learning to the insPLAD power-line inspection image dataset for fault classification.

EDUCATION

M.S., Computer Science | University of South Dakota, Vermillion, SD | Dec 2024 | GPA: 3.6/4.0

B.Tech, Computer Science & Engineering | BVC College of Engineering (JNTUK), Rajahmundry | 2022

ADDITIONAL EXPERIENCE

Student Lead, USD Campus Retail Food Services | Aug–Dec 2024 — inventory checks, supply ordering, new-staff training, and service-demand observations for managers.
